

Open Elective Courses

Introduction

Choice Based Credit System (CBCS) is promoted in such a way that different open elective courses should be offered by every department to other departments. This interdisciplinary of learning open elective courses by other department students will have learning awareness and job oriented benefits. Students require the opportunity to choose any open elective course from different departments and apply their knowledge to acquire jobs in that field of course. Learning and employment benefits are not only through their own course subjects but also through open elective courses.

Advantages

- The CBCS offers the students to choose open elective courses of their own choice.
- They can also opt for an interdisciplinary approach to learn a subject.
- The students have more scope to enhance their skills and more scope of taking up case studies, projects and assignments, vocational training including entrepreneurship.
- It improves the job opportunities of students.
- It will help in enabling potential employers assess the performance of students on a scientific scale.

Procedure

Every student shall earn 3 credits by choosing one of the open elective courses from the following list. Further students from a particular program, for example Mining Engineering, shall not opt for open electives offered by their own program. Students shall consult their class mentors before opting for an open elective course. The open elective courses on offer will be subject to availability of time table slot, faculty members, class rooms and minimum class strength specified from time to time.

Students may choose any one of the following courses.

Open Elective Courses of 5th Semester – Academic Year 2021-22

Semester 'V'		
S. No	Department	Open Elective Courses
1	Department of EEE	Principles of Robotics and Applications
2	AMET Business School	Basics of Entrepreneurship Development
3	Department of Naval Architecture and Offshore Engineering	Ocean Energy
4	Department of Petroleum Engineering	Petroleum Refining Technology
5	Department of Information Technology	Web Design Fundamentals
6	Department of Mathematics	Mathematics for Competitive Exam-II
7	Department of Chemistry	Pollution and its Management
8	Department of Physics	Space Science
9	Department of Mining Engineering	Disaster Management
10	Department of Food Processing Technology	Milk and Milk Products
11	Department of Mechanical Engineering	Engineering Instruments and Measurements
12	Department of Marine Biotechnology	Biomaterials for Engineering Application

Open Elective Courses of 7th Semester

Semester 'VII'		
S. No	Department	Open Elective Courses
1	Department of EEE	Introduction to Electric Vehicles
2	AMET Business School	Sales Management
3	Department of Naval Architecture and Offshore Engineering	Introduction to Underwater Technology
4	Department of Petroleum Engineering	Petroleum Hazards and Risks
5	Department of Information Technology	Ethical Hacking and Cyber Security
6	Department of Mathematics	Logical deduction and Non-verbal reasoning
7	Department of Mining Engineering	Geospatial technology for Engineers
8	Department of Food Processing Technology	Food Industry By-product Processing
9	Department of Mechanical Engineering	Alternate source of Energy
10	Department of Marine Biotechnology	Ornamental Fish Culture
11	Department of Physics	Fundamentals of Lasers

PROGRAM	Common to all the BE Programmes offered in AMET (ME, Mech, EEEM, PE, HE, NA &OE, Mining) and B.Tech FPT; BBA Shipping, B.Com., LCA				
Course Code: UEEEO02	Course Name: Principles of Robotics and Applications	L 3	T 0	P 0	C 3
Year and Semester	III Year / V semester	Contact hours per week (3Hrs)			
Prerequisite course	NIL				
Course category	Humanities and Social Sciences	Management courses	Professional Core	Professional Elective	
	Basic Science	Engineering Science	Open Elective	Mandatory	
			√		
Course Objective	<ul style="list-style-type: none"> • To Outline the basics of robotics and its applications • To discuss the types of electrical drives in robots • To Summarize different types of sensors and actuators used to design robots 				
Course Outcome	<p>After the successful completion of the course, the students will be able to:</p> <ol style="list-style-type: none"> 1. Outline the basic concept of robotics. 2. Explain the functions of basic components of a robot 3. Interpret various types of Sensors 4. Illustrate various types of End Effectors 5. Implement the robots in industries 6. Apply the concepts of robots in real time applications 				
<p>UNIT I: BASIC CONCEPTS</p> <p>Brief history-Types of Robot–Technology-Robot classifications and specifications-Design and control issues, Programming languages.</p> <p>Unit 2: ROBOT DRIVE SYSTEMS 9 hours</p> <p>Pneumatic Drives-Hydraulic Drives-Mechanical Drives-Electrical Drives-D.C. Servo Motors- Stepper Motors,-A.C. Servo Motors-Salient Features- Applications and Comparison of all Drives.</p>					

Unit 3: SENSORS FOR ROBOTS**9 hours**

Introduction to robotic sensors, vision systems, Range detectors, assembly aid devices, force and torque sensors, machine vision, ranging, laser, acoustic, magnetic, fiber optic and tactile sensors.

Unit 4: ROBOT AND END EFFECTORS**9 hours**

Introduction-classification of end effectors-Types of Grippers- Hooks-scoops and other devices-Gripper force analysis and design of Drive system for gripper.

Unit 5: APPLICATION OF ROBOTS**9 hours**

Introduction to robot programming languages-robots in manufacturing and non- manufacturing applications- selection of robot.

Total hours:45 hours**TEXT BOOKS**

PROGRAM	ABS UG – OPEN ELECTIVE					
Course Code	Course Name :		L	T	P	C
	Basics of Entrepreneurship Development		3	0	0	3
Year and Semester	III (V Semester)		Contact hours per week			
Prerequisite course	NIL		(3Hrs)			
Course category	Humanities and Social Sciences	Management courses	Professional Core		Professional Elective	
	Basic Science	Engineering Science	Open Elective		Mandatory	
			✓			
Course Objective	<ol style="list-style-type: none"> 1. To learn the basics of entrepreneurship 2. To study the different ways to become an entrepreneur 3. To learn about project management 4. To understand the financial analysis for business 5. To understand the various marketing channels 					
Course Outcome	<p>The Students will be able to</p> <ol style="list-style-type: none"> 1. To know the basics of entrepreneurship 2. Learn the process of setting up a new business together with problems to be faced 3. Learn about project management 4. Learn about financial analysis and sources of finance 5. Get an idea about marketing channels 6. Able to start the new business establishment 					
<p>UNIT – I Introduction to Entrepreneurship:</p> <p>Definition of Entrepreneur, Entrepreneurial Traits, and Entrepreneur vs. Manager, Entrepreneur vs. Entrepreneur. The Entrepreneurial decision process. Role of Entrepreneurship in Economic Development, Ethics and Social responsibility of Entrepreneurs. Opportunities for Entrepreneurs in India and abroad. Woman as Entrepreneur. (10 hours)</p> <p>UNIT – II Creating and Starting the Venture</p> <p>Sources of new Ideas, Methods of generating ideas, creating problem solving, product planning and development process.(8 hours)</p> <p>UNIT – III The Business Plan</p> <p>Nature and scope of Business plan, Writing Business Plan, Evaluating Business plans, Using and implementing business plans. Marketing plan, financial plan and the organizational plan, Launching formalities. (10 hours)</p> <p>UNIT – IV New Venture Expansion Strategies and Issues</p>						

Features and evaluation of joint ventures, acquisitions, merges, franchising. Public issues, rights issues, bonus issues and stock splits. (7 hours)

UNIT-V Institutional support to Entrepreneurship

Role of Directorate of Industries, District Industries Centers (DICs), Industrial Development Corporation (IDC), State Financial corporation (SFCs), Commercial banks Small Scale Industries Development Corporations (SSIDCs), Khadi and village Industries Commission (KVIC), National Small Industries Corporation (NSIC), Small Industries Development Bank of India (SIDBI).

(10 hours)

Total 45 Hours

TEXT BOOKS :

1. Dynamics of Entrepreneurial Development and Management, Vasant Desai, Publisher: Himalayan Book Company

PROGRAM		COMMON TO ENGINEERING, MANAGEMENT AND COMMERCE			
Course Code	Course Name : WEB DESIGN FUNDAMENTALS	L	T	P	C
		0	2	2	3
Year and Semester	III YEAR (SEMESTER V)	Contact hours per week (4 Hrs)			
Prerequisite course	Basic knowledge of HTML Tags				
Course category	Humanities and Social Sciences	Management courses	Professional Core	Professional Elective	
	Basic Science	Engineering Science	Open Elective	Mandatory	
			✓		
Course Objective	<ol style="list-style-type: none"> 1. Learn the basics of web concepts and HTML 2. Be familiar to use the scripting languages – JavaScript 3. Learn to develop XML and DTD documents 4. Know the fuzzy control applications 5. Learn genetic programming 				
Course Outcome	<p>After completion of the course, the students will be able to</p> <ol style="list-style-type: none"> 1. Apply solutions for static web page problem using HTML 2. Design an interactive web page using CSS. 3. Design a dynamic web page using Java script 4. Implement a service side program in server 5. Develop a well formed / valid XML document 6. Apply a server side JSP and ASP scripting languages in real world applications 				
UNIT I INTRODUCTION TO HTML					
Introduction to World Wide Web - Basics of HTML - Tags and Attributes - Elements - Images and Hyperlink - Frames - Tables - Lists – Forms					
UNIT II INTRODUCTION TO CASCADING STYLE SHEETS (CSS)					
Introduction to CSS - Creating Style Sheet - Properties - ID and Class - Styling: Background - Text Format - Controlling Fonts - Working with block elements and objects - Lists and Tables - Box Model					
UNIT III BASICS OF JAVASCRIPT					
Introduction to JavaScript - Data types - Variables - Operators - Conditionals and Loops - Arrays - Functions - Built-in objects - Methods and Properties - Form validation – online registration page.					
UNIT IV SERVER SIDE PROGRAMMING					
Introduction to XML - Attributes - Tags - Prolog - Namespace - Comments - Structure in Data - Elements - Naming Rules - DTD - DOM methods					
UNIT V INTRODUCTION TO ASP AND JSP					
Basics of ASP - Working with ASP - Creating a simple ASP - Declaring variables and methods in pages -					

Script lets - Session and cookies – JSP – Overview - Lifecycle – Syntax - Directives - Implicit Objects, Application - Simple interactive web page – quiz application

TUTORIAL: 30 HOURS

EXPERIMENT LIST

1. Design a page having suitable background color and text color with title “My First Web Page” using all the attributes of the Font tag.
2. Create a HTML document giving details of your [Name, Age], [Address, Phone] and [Register Number, Class] aligned in proper order using alignment attributes of Paragraph tag.
3. Write HTML code to design a page containing some text in a paragraph by giving suitable heading style.
4. Create a web page using Inline CSS
5. Create a web page using Embedded CSS
6. Create a web page using CSS BOX model
7. Write a java script program to perform arithmetic calculation
8. Create a web page using java script to validate user name and password
9. Create a java script interactive web page
10. Create a valid xml document for student information
11. Create an XML document with internal DTD
12. Create an xml document with external DTD
13. Create a simple web application using ASP
14. Write a JSP program to perform session tracking
15. Write a JSP program to implement quiz application

PRACTICAL: 30 HOURS

TOTAL : 60 HOURS

TEXT BOOKS

1. Deitel H.M. and Deitel P.J., “Internet and World Wide Web - How to program”, Pearson Education, Fourth Edition, 2012.

REFERENCES

1. Jennifer Niederst Robbins, “Learning Web Design”, O’Reilly fifth edition, 2018.

CHEMISTRY – POLLUTION AND ITS MANAGEMENT

Total contact Hours: 45

Prerequisite: Nil

Course Objectives

1. To learn the basic fundamental concepts in the field of water pollution
2. To know the standards and importance of water pollution
3. To study the various industrial effects and mitigation management
4. To learn the importance of methods of control of water pollution
5. To study the various water control act and functions of regulatory boards

UNIT I – SOURCES & CHARACTERISTICS OF WATER POLLUTION (9 Hrs)

Water and wastewater pollution – Sources & Types of water and wastewater pollution – Physical, chemical and biological characteristics – Effects of water pollution. Drinking water - quality standards – WHO, ICMR, ICAR, Central and State quality control norms.

UNIT II – WATER QUALITY & TESTING PROCEDURES (9 Hrs)

Quality of surface water – Water quality in flowing water, Water quality in impounded water, Ground water quality – Testing procedures of important water quality parameters (pH, Electrical Conductivity, Total Dissolved Solids, Calcium, Magnesium, Chloride, Sulfate, Sodium, Potassium, Dissolved Oxygen, Iron, Total Kjeldahl nitrogen, FRC, FAC).

UNIT III – INDUSTRIAL ACTIVITY & MITIGATION MEASURES (9 Hrs)

Role of water in different industries – Effluent discharge characteristics – Discharge Standards for River and Streams – Role of stakeholders, public, NGOs, Government in Protection of Water bodies – Control measures – Industrial water contamination due to industries.

UNIT IV – WATER POLLUTION REGULATION (9 Hrs)

Administrative regulations under recent legislations in water pollution control. Water (Prevention & Control of Pollution) Act 1974 and its Amendment Act 1988, Rules 1975, Cess Act 1977 and its Amendment Act 1991.

UNIT V – FUNCTIONS AND MANAGEMENT OF REGULATORY BOARDS(9 Hrs)

Sustainable Development, Rain Water Harvesting – Methods – Water Pollution – Causes and Effects – Role of Regulatory bodies and Local bodies – CPCB – TWAD Board – CMWSSB etc. – Case studies related to Effective Water Management

PROGRAM	B.E, B.TECH, B.Com, BBA				
Course Code: UDPHO 07	SPACE SCIENCE	L	T	P	C
		3	0	0	3
Year and Semester	III, V				
Prerequisite course	Nil				
Course category	Humanities and Social Sciences	Management courses	Professional Core	Professional Elective	
	Basic Science	Engineering Science	Open Elective	Mandatory	
			✓		
Course Objective	<ol style="list-style-type: none"> 1. To Introduce Space science 2. To explain the formation of solar systems 3. To demonstrate formation of stars 4. To describe origin of galaxies 5. To apprise the creation of universe 				
Course Outcome	<p>After completion of the course, the students will be able to</p> <ol style="list-style-type: none"> 1. To understand the basic concepts to Space. 2. To discuss the laws of solar system. 3. To demonstrate formation of stellar objects 4. To analyze evolution and origin of galaxies. 5. To demonstrate creation of Universe 6. To summarize the basic laws of space science and formation of universe 				
Unit 1: Introduction			(9 Hours)		
Introduction to space science -applications, historical development-Space programs -National and International-Space organizations-Space craft subsystems-Rocket launch vehicles and launching mechanism.					
Unit 2: Solar System			(9 Hours)		
Nebular theory of formation of our Solar System. Nuclear reaction as the source of energy. Sun and Planets: Brief description about shape size, period of rotation about axis and period of revolution, distance of planets from sun, Bode's law, Kepler's Laws of planetary motion, Newton's deductions from Kepler's Laws, Newton's Law of gravitation, determination of mass of earth, determination of mass of planets with respect to earth. Brief description of Asteroids, Satellites and Comets					
Unit 3: Stars and Stellar evolution			(9 Hours)		
Stellar spectra and structure, stellar evolution, nucleo-synthesis and formation of elements. Classification of stars, Luminosity of star, variable stars; composite stars (white dwarfs, Neutron stars, black					

hole, star clusters, supernova and binary stars); Chandrasekhar limit.

Unit 4: Galaxies

(9 Hours)

The distance of galaxies, The Hubble's law, Clusters and super clusters, Colliding galaxies, Origin and evolution of galaxies, quasars, Ultraluminous galactic nuclei, Active galaxies, Gamma ray busters

Unit 5: Cosmology: Origin and Evolution of Universe

(9 Hours)

The expanding Universe, Big-Bang, cosmic microwave background radiation, Universe before recombination, Shape of Universe, Dark energy and accelerating universe, search for extra terrestrial life.

Total : 45 Hours

			✓		
Course Objective	To gain comprehensive knowledge on oil refining and associated downstream processing activities and modern technologies involved in it.				
Course Outcome	At the end of the course, the Students will be able to				
	1	Classify the Distillation process in refinery by separation of crude into different petroleum products and testing the products with ASTM standards			
	2	Explain about the Secondary processing and its classification in the refineries.			
	3	Describe about Cracking of crude oil into other products and its importance in the refineries with its applications in petrochemical industries			
	4	Explain about the Unit process in petrochemical industries and its production techniques that will enhance the study of different petrochemicals.			
	5	Classify the Polymerization and its production methods in petroleum industries and its applications.			
	6	Describe the applications of petrochemical products			

UNIT I – INTRODUCTION

(9Hrs)

Origin, exploration and production of Petroleum, Types of crudes, composition, characteristics, Products Pattern, Indigenous and imported crudes. Crude heating, primary distillation principles, separation of cuts, gaps / overlaps, stripping. Desalting heat balance in distillation, energy input and recovery, vacuum distillation, types of trays, draw offs, intermediate product, quality control.

UNIT II- SECONDARY PROCESSING

(9 Hrs)

Lube oil and wax processing, solvent extraction, dewaxing desilting, deasphalting, clay contacting, principles operating parameters, feed and product equalities and yields. Types and functions of secondary processing, cracking, thermal cracking and visbreaking, different feed stocks, products, yields and qualities.

UNIT III – CRACKING AND ITS TYPES

(9 Hrs)

Fluid catalytic feed stocks and product yields and qualities. Catalyst and operating parameters. Steam Reforming, Hydrogen, Synthesis gas, cracking of gaseous and liquid feed stocks, olefins, Diolofins, Acetylene and Aromatics and their separation.

UNIT IV- UNIT PROCESSES

(9 Hrs)

Alkylation, oxidation, dehydrogenation, nitration, chlorination, sulphonation and Isomerization.

UNIT V – POLYMERISATION**(9 Hrs)**

Models and Techniques, production of polyethylene, PVC, Polypropylene, SAN, ABS, SBR, Polyacrylonitrile, Polycarbonates, Polyurethanes, Nylon, PET

(Total 45 Hrs).**Text Books**

PROGRAM		BE-Mechanical Engineering			
Course Code: UDMCO03	ENGINEERING INSTRUMENTS AND MEASUREMENTS	L	T	P	C
		3	0	0	3
Year and Semester	III Year (V Semester)	Contact hours per week (3Hrs)			
Prerequisite course	PHYSICS				
Course category	Humanities and Social Sciences	Management courses	Professional Core	Professional Elective	
	Basic Science	Engineering Science	Open Elective	Mandatory	
			✓		
Course Objective	<ol style="list-style-type: none"> To learn about the measurement systems To learn about the parameter measurements To understand about linear and angular measurements To understand about the metrology of surfaces To learn about the advanced metrology 				
Course Outcome	<ol style="list-style-type: none"> After completing this course, the students will be able to analyze the general concept of measurement systems They will be able to utilize the parameter measurements The students will be able to apply the linear and angular measurements They will be able to apply angular measurements The students will be able to analyze the metrology of surfaces They will be able to make use of advanced metrology 				
UNIT I : MEASUREMENT SYSTEMS		9 Hrs			
General concept - units and standards - characteristics of measuring instruments - sensitivity, stability, range, accuracy and precision - static and dynamic response - repeatability, hysteresis - systematic and random errors - correction, calibration – interchangeability					
UNIT II : PARAMETER MEASUREMENTS		9 Hrs			
Measurement of force, torque, power using mechanical, pneumatic, hydraulic, electrical instruments - flow measurement - rotameter, pitot tube - Temperature measurement - bimetallic strip, thermocouple, electrical resistance thermometer					
UNIT III : LINEAR AND ANGULAR MEASUREMENTS		9 Hrs			
Linear measuring instruments - vernier, micrometer, slip gauges, tool maker's microscope - interferometry, optical flats, comparators - mechanical, pneumatic, electrical applications - angular measurements - sine bar, sine center, bevel protractor, autocollimator					
UNIT IV : METROLOGY OF SURFACES		9 Hrs			
Fundamentals of GD & T - measurement of straightness, flatness and roundness - measurement of surface finish -					

Functionality of surfaces, parameters, comparative, stylus based and optical measurement techniques, filters-
Introduction to 3D surface metrology.

UNIT V : ADVANCED METROLOGY

9 Hrs

Precision instruments based on laser - principles - laser interferometer - application in linear, angular measurements - machine tool metrology - Coordinate Measuring Machine (CMM) - constructional features - types, applications - digital devices - computer aided inspection - 3D scanning - machine vision systems

PROGRAM	B.E.					
Course Code	Course Name :		L	T	P	C
PDBTO04	Biomaterials for Engineering Applications		3	0	0	3
Year and Semester	III Year (V Semester)		Contact hours per week (2 Hrs)			
Prerequisite course	Any Under Graduate degree with Engineering background					
Course category	Humanities and Social Sciences	Management courses	Professional Core		Professional Elective	
	Basic Science	Engineering Science	Open Elective		Mandatory	
			✓			
Course Objective	<ul style="list-style-type: none"> • Many of the biologically derived materials such as biosurfactants, biopolymers and biomaterials are widely used. • Biomaterials used in Packaging, Constructions, paints, Oil and gas, agriculture/Forestry/Fishery, Electronics, Medical, Dental, and Pharmaceutical Applications. • This course would provide overviews of Modern Biopolymers are used in Engineering. 					
Course Outcome	At the end of the course the student will be able to :					
	1.	Outline the process, properties and surface characterization of Biomaterials.				
	2.	List out the different types of biomaterials.				
	3.	Classification of biomaterials based on the industrial applications.				
	4.	Extend the knowledge of biomaterials in medical applications				
	5.	List out the new classes for biomaterials for novel applications.				
6.	Summarize the applications of biomaterials in engineering.					
<p>UNIT 1- Introduction to Biomaterials</p> <p>Introduction to biomaterials engineering and processing - an overview- Properties of materials- Surface properties and surface characterization of materials.</p> <p>UNIT 2- Types of Biomaterials</p> <p>Biomaterials Classifications- Bioinert materials- Bioactive materials- Bioresorbable materials and biomineralisation - Mechanisms and its uses.</p> <p>UNIT 3- Biomaterials in Industrial Applications</p> <p>Classes of materials used in medicine: metals, polymers, FRPs, fabrics- Bioceramics- Hydrogel- Silicone biomaterials: history and chemistry- Medical fibers and biotextiles.</p>						

UNIT 4- Biomaterials in medical applications

Design of materials for biomedical application: Cardiovascular medical devices- Tissue engineering scaffolds- Ophthalmologic applications- Bioelectrodes and biosensors- Burn dressing and skin substitutes- Sutures- Drug delivery systems (DDS).- Dental materials- Conventional acid-base cements.

UNIT 5- New Classes of Biomaterials for novel applications

Applications in Nephrology- Applications in Ophthalmology- Applications in Orthopedics- Applications in Drug Delivery.

PROGRAM	Common to all the BE Programmes offered in AMET (ME, Mech, EEEM, PE, HE, NA &OE, Mining) and B.Tech FPT; BBA Shipping, B.Com., LCA				
Course Code: UEEE011	Introduction to Electric Vehicles	L 3	T 0	P 0	C 3
Year and Semester	IV Year / VII Semester	Contact hours per week (3Hrs)			
Prerequisite course	NIL				
Course category	Humanities and Social Sciences	Management courses	Professional Core	Professional Elective	
	Basic Science	Engineering Science	Open Elective	Mandatory	
			√		
Course Objective	<ol style="list-style-type: none"> To present a comprehensive overview of Electric and Hybrid Electric Vehicles. To introduce general aspects of advanced Electric and Hybrid Electric Vehicles. To provide knowledge on modelling and implementation of HEV using Power Electronics concepts. 				
Course Outcome	<p>After the successful completion of the course, the students will be able to:</p> <ol style="list-style-type: none"> Infer the concepts of different configurations of electric vehicles. Recognize of Electric Vehicle machineries. Identify proper energy storage systems for vehicle applications. Interpret the basic drive system of electric vehicles. Comprehend the energy management strategies in Electric Vehicles. Apply the concepts of Electric Vehicles. 				
UNIT I Introduction		9 Hrs			
Basics of vehicle mechanisms, history of electric vehicles (EV) and hybrid electric vehicles (HEV), need and importance of EV and HEV, Power/Energy supply requirements.					
UNIT II Electric Vehicle Machineries		9 Hrs			
Electric system components for EV/HEV, suitability of DC and AC machines for EV/HEV applications, AC and DC Motor drives. Advanced permanent magnet and switch reluctance machines, configuration and control of drives.					
UNIT III Energy Storage Systems		9 Hrs			
Requirements of Storage systems in EV/HEV, Review of batteries, fuel cells, flywheels and ultra-capacitors as energy sources for EV/HEV, comparison and characteristics.					
UNIT IV Drives for Electric Vehicles		9 Hrs			
Basics of electric traction and hybrid traction systems, various EV/HEV drive-train topologies, power flow control in drive-train topologies. Modeling and analysis of EV/HEV drive train, sizing of motor, power electronics in HEV, various vehicle subsystems.					

UNIT V Energy Management Strategies and Energy Efficiency**9 Hrs**

EV/HEV energy management strategies, classification and comparison of various energy management strategies, energy efficiency comparison for various EV and HEV variants.

TOTAL: 45 Hrs**TEXT BOOKS:**

PROGRAM	ABS UG – OPEN ELECTIVE					
Course Code	Course Name : Sales Management		L	T	P	C
			3	0	0	3
Year and Semester	IV (VII Semester)		Contact hours per week (3 Hrs)			
Prerequisite course	NIL					
Course category	Humanities and Social Sciences	Management courses	Professional Core	Professional Elective		
	Basic Science	Engineering Science	Open Elective	Mandatory		
			✓			
Course Objective	<ol style="list-style-type: none"> 1. To understand the objectives of sales management 2. To learn the methods of selling of products 3. To understand the structure of sales department in an organization 4. To learn the physical distribution of products 5. To understand the appropriate channel of distribution of products 					
Course Outcome	<p>The Students will be able to</p> <ol style="list-style-type: none"> 1. Learn the basics of sales and distribution management 2. Get to know about the selling process 3. Learn the need for sales organisation 4. Know the role of the physical distribution system 5. Learn to make appropriate channel management related decisions 6. Learn the techniques of sales promotion 					

Unit 1: Introduction: Sales Management

Nature, Scope, Objectives, functions and importance of Sales Management. Developing a Sales Organisation – its importance and functions. Formulation of Sales Strategy.(9 hours)

Unit 2: Managing the Sales Force:

Steps in designing and managing a Sales Force, functions and role of sales person and the sales manager, recruitment, selection and training of the sales force.(9 hours)

Unit 3: Personal Selling:

Nature, Scope, Importance, Significance and limitations of Personal Selling, Personal Selling as a career, basic steps in Personal Selling Process, methods of Approaching, Objections Handling.
(9 hours)

Unit 4: Sales Promotion:

Meaning and Significance of Sales Promotion, factors influencing Sales Promotion, Tools of Sales Promotion and Sales Promotion plan for new Products, factors affecting promotion mix.(9 hours)

Unit 5: Managing the distribution function:

Role of marketing intermediaries, factors influencing distribution channels, Impact of Online shopping.(9 hours)

TOTAL: 45 HOURS

TEXT BOOKS :

1. Sales Management-Still and Cundiff and Giovonni, Prentice Hall
2. Fundamentals of selling, Charles Futrell, McGraw Hill
3. Marketing Channels , Louis W Stern and Adel L Ansary, Thomson Publishing

Course Objective	<ol style="list-style-type: none"> Expose the awareness of cyber security issues and challenges in IT environment Learn the techniques needed for providing protection and security to our personal data and information resources Develop awareness in taking precautions in protecting them from cyber crimes and fraudulent activities Experiment and learn the skills to provide protection and security to organizational data and information to build a secured IT infrastructure 				
Course Outcome	<p>After completion of the course, the students will be able to</p> <ol style="list-style-type: none"> Understand the fundamentals of network security, security architecture and threats Apply the different cryptographic operations of cryptographic algorithms Identify vulnerability in IT System Understand the malware infection and detection Apply computer forensic analysis for investigation Understand the cyber security regulation and standards 				
UNIT I INTRODUCTION TO CYBER SECURITY					9
Hours					
Overview of Cyber Security - Internet Governance - Challenges and Constraints - Cyber Threats - Cyber Crime - Cyber terrorism - Need for a Comprehensive Cyber Security Policy and International convention on Cyberspace					
UNIT II CRYPTOGRAPHY AND NETWORK SECURITY					9
Hours					
Introduction to Cryptography - Symmetric key Cryptography - Asymmetric key Cryptography - Message Authentication - Digital Signatures - Applications of Cryptography - Overview of Firewalls - Types					

of Firewalls - User Management

UNIT III CYBER SECURITY VULNERABILITIES

9

Hours

Overview of Cyber Security Vulnerabilities - Vulnerabilities in software - System administration - Complex Network Architectures - Open Access to Organizational Data - Weak Authentication - Unprotected Broadband communications - Poor Cyber Security Awareness

UNIT IV INTRUSION DETECTION AND PREVENTION

9

Hours

Intrusion - Physical Theft - Abuse of Privileges - Unauthorized Access by Outsider - Malware infection - Intrusion detection and Prevention Techniques - Anti-Malware software - Network based Intrusion detection Systems and Prevention Systems

UNIT V CYBER FORENSICS AND LAWS

9

Hours

Introduction to Cyber Forensics - Handling Preliminary Investigations - Conducting disk-based analysis - Scrutinizing E-mail - Validating E-mail header information - Tracing Internet access - Introduction to Cyber security regulations - Cyber security standards - case study.

TOTAL : 45 HOURS

TEXT BOOK:

1. William Stallings, "Cryptography and Network Security: Principles and Practice", Sixth Edition, Pearson/Prentice- Hall, 2013.

Elective Course: Logical deduction and Non-verbal reasoning

Year :IV/ VII Sem

Course objectives:

1. To develop the logical reasoning in any kind of scenario.
2. To enable students to prepare for any kind interview and carrier developments.

Unit I (9 hours)

Problems:Logical reasoning-Statement regarding arguments-Statement regarding assumptions-Course of Action.

Unit II (9 hours)

Problems: Conclusions-conclusions from passages -Theme deductions-Questions and statements.

Unit III (9 hours)

Problems: Analogy-Series-Classification-mirror images and water images.

Unit IV (9 hours)

Problems: - Embedded figures – complete and incomplete pattern-Figure matrix- Rule Detections.

Unit V (9 hours)

Problems:Grouping of identical figures-Cube and dice- Dot situation-Figure formation and Analysis.

Text Books:

1. A Mordern approach to verbal and Nonverbal Reasoning-. R.S.Aggarwal -S.Chand, New Delhi-reprint 2007.

Course category	Humanities and Social Sciences	Management courses	Professional Core	Professional Elective	
	Basic Science	Engineering Science	Open Elective	Mandatory	
			✓		
Course Objective	<ol style="list-style-type: none"> 1. Define GIS and its implementation 2. Discuss digital data creation 3. Learning GIS related softwares. 4. Understanding the need of information of information technology for geospatial technology 5. Describe the engineering applications of GIS as a component to ERP system 				
Course Outcome	<p>At the end of the course the student will be able to:</p> <ol style="list-style-type: none"> 1. Understand the various environmental terminologies 2. Apply the fire source & its prevention in mines 3. Analyze the natural air circulation process in subsurface 4. Understand the man-made methods deployed for air circulation in mines 5. Create the design procedure for mining ventilation 6. Understand the mine ventilation methods and its planning 				
<p>UNIT I INTRODUCTION (9 Hrs) Definition – Disaster, Hazard, Vulnerability, Resilience, Risks – Types of disasters – Earthquake, Landslide, Flood, Drought, Fire – Classification, Causes, Impacts including social, economic, political, environmental, health, psychosocial.</p> <p>UNIT II APPROACHES TO DISASTER RISK REDUCTION (DRR) (9Hrs) Disaster cycle – Phases, Culture of safety, prevention, mitigation and preparedness of community based DRR, structural – non-structural measures, Roles and responsibilities of community, Panchayat Raj Institutions/Urban Local Bodies (PRI/ULB), Institutional Processes and Framework at State and Central level – State Disaster Management Authority (SDMA).</p> <p>UNIT III INTER-RELATIONSHIP BETWEEN DISASTERS AND DEVELOPMENT (9 Hrs) Factors affecting Vulnerabilities, differential impacts, impact of development projects such as dams, embankments, changes in Land-use – Impact of Climate change</p>					

UNIT IV DISASTER RISK MANAGEMENT IN INDIA

(9 Hrs)

Hazard and Vulnerability profile of India, Components of Disaster relief – Water, Food, Sanitation, Shelter, Health, Waste management – Role of GIS and Information technology Components in Preparedness, Risk Assessment, Response and Recovery Phases of Disaster – Disaster Damage Assessment.

UNIT V DISASTER MANAGEMENT: APPLICATIONS AND CASE STUDIES AND FIELD

WORKS

(9 Hrs)

Landslide Hazard Zone - Case Studies, Earthquake Vulnerability Assessment of Buildings and Infrastructure – Drought Assessment - Case studies – Coastal Flooding – Storm Surge Assessment – Floods - Fluvial and Pluvial Flooding - Case studies – Health Disaster - Case studies – Man Made Disasters - Case studies.

Designed by “ Department of Mining Engineering”

Name of the Subject: FOOD INDUSTRY BY PRODUCT PROCESSING

Subject Code	Contact Hours			Credit	Total Hours to Complete	Max Marks
	Lecture	Tutorial	Practical			
UCFPO09	3	0	0	3	45	100

OBJECTIVES

- To learn about the available byproducts and it's processing.
- To learn on effluent treatment with control measures on waste disposal.

UNIT I

Industrial By-products and Waste: Potentials and prospects of developing by-products industry in India.

UNIT II

Agricultural waste and agro based industrial waste management. By products of cereals. By products of legumes.

UNIT III

By products of oil seeds. By products of dairy. By products of fruit and vegetables processing industries.

UNIT IV

By products of meat, poultry and eggs and By- products of fish processing units.

UNIT V

By products of plantation crops and spices. Uses of by-products of agro based industries in various sector. Byproducts of fermentation industries. By- products of sugar and bakery industries.

OUTCOME

The basics and in depth knowledge on byproduct utilization and waste management.

PROGRAM	BE-Naval Architecture & Offshore Engineering				
Course Code UDNAO08	Introduction to Underwater Technology	L 3	T 0	P 0	C 3
Year and Semester	IV Year (semester VII)		Contact hours per week (3Hrs)		
Prerequisite course	NIL				
Course category	Humanities and Social Sciences	Management courses	Professional Core	Professional Elective	
	Basic Science	Engineering Science	Open Elective	Mandatory	
Course Objective	This course provides basic knowledge about ocean, under water vehicles and under water operations.				
Course Outcome	<p>After completion of the course, the students will be able to:</p> <ol style="list-style-type: none"> 1. List the various challenges involved in the underwater exploration. 2. Impart the knowledge on underwater exploration. 3. Inspect the different pipeline methods and their installation with respect to subsea applications 4. Importance of different underwater vehicles and their operations 5. Develop the various sensors and navigation systems used for underwater applications 6. Build the knowledge on marine resources and its explorations using latest technologies. 				
UNIT I – MARINE RESOURCES					
Introduction, Challenges in deep sea, Seafloor characteristics, Physical properties of sea water. Effects of density, salinity and temperature on sound speed, Ocean resources, classification, potential uses of sea, Mineral and hydrocarbon resources					
UNIT II – UNDERWATER EXPLORATION					
Exploration, development, Underwater Sound Channels, Underwater instruments for positioning, signal transfer and mapping, production of hydrocarbons, deep sea mining – national developments					
UNIT III – SUBSEA PIPELINE AND RISERS					
Introduction subsea pipeline, Pipeline Elements, Piping material selection, Pipeline survey and mapping, Pipeline route; Pipeline Installation Methods. Riser – different types of risers					
UNIT IV – INTRODUCTION TO UNDERWATER VEHICLES					
Introduction, Unmanned marine vehicles – Applications, Unmanned surface vehicles, Unmanned underwater vehicles – Remotely Operated Vehicles (ROVs) and Autonomous Underwater Vehicles (AUVs), Classification, Types of ROV services, Operations, Type of propulsions, Design theory – Vehicle design and stability					
UNIT V - UNDERWATER NAVIGATION & SENSING SYSTEMS					
Vehicle sensors ; Function of sensors, Types of sensors, Sensor Categories Vehicle navigation sensors, Flux gate compass, Tether turn counter, Pressure-sensitive depth gauge, Obstacle avoidance sonar, Altimeter, Inclinometer, Vehicle lighting.					
Total: 45 Hours

PROGRAM	B.E. Petroleum Engineering				
Course Code UDPEO07	Course Name :	L	T	P	C
	Petroleum Hazards & Risk	3	0	0	3
Year and Semester	IV Year (VII Semester)	Contact hours per week (4Hrs)			
Prerequisite course	NIL				
Course category	Humanities and Social Sciences	Management courses	Professional Core	Professional Elective	
	Basic Science	Engineering Science	Open Elective	Mandatory	
			✓		
Course Objective	To understand the various hazards and environmental issues confronting the petroleum operations and remedial measures to be undertaken.				
Course Outcome	At the end of the course, Students will be able to				
	1	Identify the Environmental impacts by the petroleum industry.			
	2	Analyze the impact of drilling and production operations			
	3	Explain the health effects & corrosion of petroleum hydrocarbons			
	4	Identify the waste treatment and disposal methods for environmental protection			
	5	Identify the waste management plans and also disposal processes for Environmental protection			
	6	Identify the Hazard, Hazard evaluation and safety measures.			
UNIT-I Introduction to environmental control in the petroleum industry (9Hrs) Atmospheric Impacts; Aquatic Impacts; Terrestrial Impacts; Ecosystem Impacts; Potential Emergencies- Ozone depletion, GHG emissions, NOx and SOx emissions, SPM emissions etc. Case studies					
UNIT-II The impact of drilling and production operations (9Hrs) Measuring toxicity-Hydrocarbons- Salt- Heavy metals- Production chemicals- Drilling fluids- Produced water- Nuclear radiation- Air pollution- Acoustic impacts- Effects of offshore platforms- Risk assessment.Surface paths- Sub-surface paths- Atmospheric paths.					
UNIT-III Environmental transport of petroleum wastes (9Hrs) Toxicity, physiological, asphyxiation, respiratory, skin effect of petroleum hydrocarbons and their mixture- Sour gases with their threshold limits-Guidelines for occupational health monitoring in oil and gas industry. Corrosion in petroleum industry- Additives during acidizing, sand control and fracturing.					
UNIT-IV Planning for environmental protection (9Hrs) Environmental audits- Waste management plans- Waste management actions- Certification of disposal processes- Contingency plans- Employee training. Waste treatment methods: Treatment of water- Treatment of solids-Treatment of air emissions Waste disposal methods: Surface disposal- Subsurface disposal. Remediation of contaminated sites: Site assessment- Remediation processes.					
UNIT-V Hazard identification (9Hrs) Hazard identification- Hazard evaluation- Hazop and what if reviews-Developing a safe process and safety management- Personal protection systems and measures. Classification of fires- The fire triangle- Distinction between fires and explosions- Flammability					

characteristics of liquids and vapors- Well blow out fires and their control- Fire fight equipment-
Suppression of hydrocarbons fires.

(Total 45 Hrs).

PROGRAM	B.E.					
Course Code PDBTO09	Ornamental Fish Culture		L	T	P	C
			1	1	1	3
Year and Semester	IV year and VII Semester		Contact hours per week (2 Hrs)			
Prerequisite course	Any under graduate degree with Engineering background					
Course category	Humanities and Social Sciences	Management courses	Professional Core		Professional Elective	
	Basic Science	Engineering Science	Open Elective		Mandatory	
			✓			
Course Objective	<ul style="list-style-type: none"> Rearing of both marine and freshwater ornamental fishes is a very simple yet commercially viable business. This paper would provide entrepreneurial avenues for the culturing of ornamental fishes through which graduates of any discipline may develop it as an entrepreneurial venture. 					
Course Outcome	At the end of the course the student will be able to :					
	1.	Outline the awareness on Ornamental Fish Culture.				
	2.	List out the types and characteristics of ornamental fishes.				
	3.	Compare the setting up of culture facility system.				
	4.	List out the different types of feed and aquarium maintenance.				
	5.	Summarize regarding the compost of solid wastes through microorganisms and earthworms.				

Unit - I: Ornamental fish culture- an introduction

Introduction, Benefits of ornamental fish keeping as a hobby, Origin of keeping ornamental fishes as pets, International market, Major countries involved in ornamental fish trade, Major suppliers, Status of ornamental fish farming in India (domestic / national market)

Unit-II: Important Ornamental Fishes

Exotic ornamental fishes: guppy, molly, swordtail, platy, gold fish, koi carp, tiger barb, Siamese fighting fish, tetra, silver shark, angel, red-tailed black shark, red finned shark. Native ornamental fishes Honey gourami, rosy barb, zebra fish, glass fish, loach, etc.

Unit - III: Setting up of Culture facilities

Different types of ornamental fish culture facilities-cement cisterns, glass aquaria, earthen ponds, earthen pots; Water requirements; Aquarium equipments: Aerators, Air pumps, Filters etc.

Unit - IV: Feed and aquarium maintenance

Readymade feeds, Artemia cysts, other live feeds, daphnia tubifex, earthworms, bloodworms, mosquito larvae.

Unit - V: Aquarium Maintenance

Management of Water Quality Parameters; temperature and pH, disease prevention and control, Chemicals and medicines. Economics- Space and investment, manpower, maintenance.

Course Objective	<ol style="list-style-type: none"> 1. To Introduce concepts of light generation 2. To explain about different light sources 3. To demonstrate working of lasers and laser systems 4. To understand the applications of lasers 5. To demonstrate the working of holograms 				
Course Outcome	<p>After completion of the course, the students will be able</p> <ol style="list-style-type: none"> 1. To understand the basic concepts of light 2. To demonstrate various light sources 3. To analyze different types of lasers. 4. To demonstrate the applications of lasers 5. To explain the working of a hologram and their applications 5. To summarize the basic understanding Laser system and their applications 				
UNIT-I Fundamentals of light energy			9 Hours		
Electromagnetic waves-properties of waves- properties of light-light emission, structure of atom, optical absorption, spontaneous emission, and stimulated emission					
UNIT-II Optical sources			9 Hours		
Monochromaticity, Coherence, Difference between laser and ordinary source, Broad band light sources and their applications in industry, population inversion, laser action, Gain of laser					
UNIT-III Lasers			9 Hours		
Main components of Laser-pumping, optical cavity, laser medium, types of laser medium, three and four level lasers, CW and pulsed lasers, Ruby laser					
UNIT IV Applications of Lasers			9 Hours		
Eye surgery, cosmetic surgery, kidney stone treatment, precision measurements, printers, CD/DVD writing,					

weapon systems, material processing

UNIT -V Holography

9 Hours

Interference-Diffraction-Recording of holograms-Reconstruction of holograms-application of holography in Non-destructive testing, data security, holographic communication

Total : 45 Hours

Text Books

1. AjoyGhatak and Thyagarajan, Lasers, Springer, 1-674

2. K.R. Nambiar, Lasers: Principles, Types and Applications, [New age International Pvt Ltd](#), 1-285
